SATETAPONG SANGUANSUK

Computer Engineering Student | Full-Stack Developer Intern

Seeking Co-op Internship: 5 Jan – 30 Apr 2027 (4 months, full-time)

Bangkok, Thailand | (+66) 81-501-8272 | satetapongs@gmail.com
github.com/satetapongsa | linkedin.com/in/satetapongsa | Portfolio: satetapong-portfolio.vercel.app

PROFESSIONAL SUMMARY

4th-year Computer Engineering student at Sripatum University who builds and deploys full-stack web applications with React, Next.js, TypeScript and Node.js. Experienced in designing PostgreSQL schemas (Supabase, Prisma), securing data with Row Level Security, and shipping projects through GitHub and Vercel. Uses AI-assisted development tools daily to build faster while reviewing and testing the output. Looking for a co-op internship where I can contribute to real products and learn from an experienced engineering team.

TECHNICAL SKILLS

Frontend: React, Next.js (App Router), TypeScript, JavaScript (ES6+), Tailwind CSS, HTML5, CSS3
Backend & Database: Node.js, Next.js API Routes, REST APIs, PostgreSQL, Supabase (Auth, RLS), Prisma ORM
Tools: Git, GitHub, Vercel, VS Code, Postman, MQTT, SQLite, AI coding assistants
Foundations: Data Structures & Algorithms, OOP, Database Design

PROJECTS

FinGuard AI – Regulatory Policy Gap Agent | Live Demo | GitHub **2026 – Present**

Next.js 15 | React 19 | TypeScript | Prisma | Neon PostgreSQL (pgvector)

- Built a multi-step AI workflow that reads Bank of Thailand circulars, detects changes between versions (added / modified / removed clauses), and compares them against internal company policies to flag gaps.
- Added guardrails requiring every AI answer to cite its source clause, and tested the pipeline against prompt-injection examples.
- Implemented role-based access control and a human-approval step: a compliance officer must approve before any remediation ticket is created.
- Recorded every agent action and approval in a SHA-256 hash-chained audit log so tampering can be detected.

Modern-CatchySPU – Course Registration System | Live Demo | GitHub **2026**

Next.js 15 | React 19 | TypeScript | Supabase (PostgreSQL) | Prisma

- Built a course registration platform designed for high traffic, splitting student data across 3 database node groups (sharding) so one failing node does not take down the whole system.
- Added staggered registration time slots and a linear-regression model that forecasts CPU/memory usage about 10 minutes ahead to support scaling decisions.
- Created a monitoring dashboard showing server health, load per shard, and traffic simulation results.

AI Parcel Box Damage Detection (Team of 4) | Live Demo | GitHub **2026**

TypeScript | React 19 | Tailwind CSS v4 | CiRA CORE Edge AI | MQTT | SQLite

- Developed the web dashboard for a conveyor inspection line that checks parcels with two cameras and an Edge AI damage classifier (CiRA CORE).
- Combined AI confidence scores with load-cell weight checks (±5% tolerance) to decide PASS / REJECT and trigger the sorting actuator.
- Queued results locally in SQLite and synced via MQTT when the network returns, so no inspection data is lost offline.
- Displayed real-time results and OEE metrics (Availability, Performance, Quality).

ACTIVITIES

- **Digital Innovation Challenge 2026** – Competitor, BFSI track (team of 3), project: FinGuard AI

EDUCATION

Bachelor's Degree in Computer Engineering **2023 – 2027 (Expected)**

Faculty of Information Technology, Sripatum University (Bangkhen), Bangkok | GPA: 2.57
Relevant Coursework: Software Engineering, Web Application Development, Database Systems, Computer Networks, Data Structures & Algorithms
