

SATETAPONG SANGUANSUK

Full-Stack Web Developer

Bangkok, Thailand | (+66)81-501-8272 | satetapongs@gmail.com
GitHub: github.com/satetapongsa | LinkedIn: linkedin.com/in/satetapongsa

PROFESSIONAL SUMMARY

Computer Engineering student at Sripatum University with hands-on experience developing full-stack web applications. Proficient across **React, Next.js (App Router), TypeScript, Node.js, Express, PostgreSQL, and Prisma ORM**. Experienced in designing REST APIs, implementing JWT authentication, relational database operations, automated CI/CD pipelines, and modern Git workflows. Focused on clean code, performance optimization, and turning complex requirements into reliable features.

TECHNICAL SKILLS

Frontend: React.js, Next.js (App Router), TypeScript, JavaScript (ES6+), Tailwind CSS, HTML5, CSS3
Backend & Database: Node.js, Express.js, REST APIs, PostgreSQL, Prisma ORM, Supabase, JWT Authentication
Tools & DevOps: Git, GitHub, GitHub Actions (CI/CD), VS Code, Postman, Vercel
Core Foundations: Data Structures & Algorithms, Object-Oriented Programming (OOP), Database Design, Clean Code

FEATURED PROJECTS

Full-Stack Web Platform	2024 – 2025
Next.js (App Router) TypeScript Tailwind CSS Prisma ORM PostgreSQL Vercel	
- Built frontend and backend logic using Next.js App Router and TypeScript for scalable, performant data rendering. - Designed PostgreSQL relational schema and handled migrations and CRUD operations using Prisma ORM. - Implemented secure JWT authentication and route middleware to protect restricted application endpoints. - Deployed the application to Vercel and utilized automated preview builds to test changes prior to production merge.	
Modular Task Management REST API & Client	2024 – 2025
React.js Node.js Express.js Supabase Postman	
- Engineered REST full API endpoints with Express.js for creating, reading, updating, and deleting task data. - Connected the React frontend to the API and organized reusable components for core task management flows. - Tested API requests and error cases with Postman collections to validate status codes and response structures.	
Automated CI/CD Workflow Setup	2025
GitHub Actions Git	
- Setup GitHub Actions workflows to run lint checks, TypeScript verification, and automated builds on Pull Requests. - Used feature branching strategies and atomic commits to keep changes organized and easy to troubleshoot.	

PROJECT EXPERIENCE

Full-Stack Developer (Academic & Independent Projects)	2024 – Present
<i>Software Engineering Practice & Web Applications — Bangkok, Thailand</i>	
- Turned project requirements into working React/Next.js features, interactive components, and responsive pages. - Debugged frontend rendering bottlenecks, asynchronous API integrations, and data-fetching issues. - Utilized Git for collaborative version control, branch management, and tracking issue resolutions.	

EDUCATION

Bachelor of Technology in Computer Engineering	2023 – 2027 (Expected)
Sripatum University • Bangkok, Thailand	
Relevant Coursework: Software Engineering, Web Application Development, Database Systems, Computer Networks, Data Structures & Algorithms.
